Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Micronized polyethylene wax is the product of polyethylene wax after micronization processing. During the production of polyethylene, a small amount of oligomers, namely low molecular weight polyethylene, is also produced, which is also called high molecular wax and abbreviated as polyethylene wax. Because of its excellent cold resistance, heat resistance, chemical resistance and abrasion resistance, it has been widely used. The method of micronization can use Jet-Microniser or Microniser/Classifier production process, that is, the coarse wax is gradually broken into particles after violently colliding with each other at high speed. It is collected by the centrifugal force and blown out under weightlessness. The major players in global and Chinese micronized polyethylene waxes market include Clariant, Honeywell, BASF, etc. These three companies account for more than 50% of the global market share. Europe and North America are the main markets?accounting for approximately 70% shares. Oxidized polyethylene wax powder is the main type, with a share over 80%. At present, micronized polyethylene wax is mainly used in coatings, and this application accounts for about 80% of the market.
