The global Microprocessor market was valued at 634.87 Million USD in 2021 and will grow with a CAGR of 2.82% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A microprocessor is a computer processor that incorporates the functions of a computer's central processing unit (CPU) on a single integrated circuit or at most a few integrated circuits. The microprocessor is a multipurpose, programmable device that accepts digital data as input, processes it according to instructions stored in its memory, and provides results as output. It is an example of sequential digital logic, as it has internal memory. Microprocessors operate on numbers and symbols represented in the binary numeral system. At present, in the foreign industrial developed countries the Microprocessor industry is generally at a more advanced level, the world's large enterprises are mainly concentrated in USA. Meanwhile, foreign companies have more advanced equipment, strong R & D capability, the technical level is in a leading position. But foreign companies' manufacturing cost is relatively high, compared with Chinese companies, the manufacturing cost has competitive disadvantage, as the Chinese Microprocessor production technology continues to improve, their share in the international market is increasing, competitiveness in the international market gradually increase. China's Microprocessor industry has developed into a national industry with certain research and production capacity, industry product mix has gradually improved,

currently China has become international Microprocessor large consumption country, but the production technology is relatively laggard, it can only produce some low-end product, although the new production lines is increasing, the high-end product is still relying on import. Intel accounted for 62.34% of the Global Microprocessor sales market share in 2016. Other players accounted for 12.04%, 7.88% including Qualcomm and Apple. The market is not only influenced by the price, but also influenced by the product performance. The leading companies own the advantages on better performance, more abundant product`s types, better technical and impeccable after-sales service. Consequently, they take the majority of the market share of high-end market.
