Abstracts

The global Milk Alternatives market was valued at 9139.36 Million USD in 2021 and will grow with a CAGR of 7.4% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A 'milk alternative' is any alternative liquid that replaces milk in a diet or recipe. Almond milk may be all the rage these days, but it's nothing new. In fact, almond milk has been around since the Middle Ages. A mixture of ground almond and water (so simple, you can make it at home!), almond milk is naturally low in calories. Almonds are high in vitamin E, manganese, selenium, magnesium, potassium, zinc, iron, fiber, phosphorous and boast the highest levels of calcium out of all the nuts. That's quite the resume?! While other forms of milk need to be fortified with vitamins (including cow's milk), almond milk is naturally chock full of nutrients. It is, however, also supplemented with calcium, but in doing so, it serves up more of the bone-building mineral than cow's milk per serving!
