## Abstracts

The global Millimeter Wave Equipment market was valued at 408.8 Million USD in 2021 and will grow with a CAGR of 26.45% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

The frequency of millimeter electronic wave lies in between 3GHz to 300 GHz. It is a special electromagnetic wave whose frequency is far beyond the frequency range of other commonly used wireless technologies. Originally electromagnetic waves having frequencies higher than 80GHz were termed as microwaves and electromagnetic waves having even higher frequencies were termed as radio waves. However, with commercialization of this technology, the demarcation between various frequencies has blurred. The demand for higher bandwidth continues to escalate as more and more consumers gain access to the internet, and as existing users report higher data consumption. From young consumers who extensively use smartphones to corporate data centers experiencing mounting volumes of data, the answer lies in offering higher bandwidths. This bandwidth demand can only be met by introducing newer technologies to the market, such as the use of fiber optic cables, which are currently the best solution for delivering maximum bandwidth. Yet, the high cost of fiber optic cables has proven to be a deterrent to its wider adoption. This is where the millimeter wave wireless technology comes into the picture by offering similar bandwidths at lower prices. The ability of millimeter wave equipment to deliver an economical solution greatly works in

its favor.
