## Abstracts

The global Mine Ventilation Equipment market was valued at 24.59 Million USD in 2021 and will grow with a CAGR of 2.37% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Ventilation is among the most important functions in a mining operation. Since ventilation directly affects the health and safety of employees working underground, mine owners take the regulation of air flow through a mine very seriously. Factors that determine ventilation design include: the type of mine, its location, the regulations around how much ventilation is required (varies by jurisdiction), and the equipment being used. The latter is especially important because a mine that uses diesel equipment will require more ventilation to dilute the diesel fumes than one that uses electric vehicles. Globally, the mine ventilation equipment industry market is low concentrated as the manufacturing technology of mine ventilation equipment is relatively matures than some high-tech equipment. And some enterprises, like Howden, Epiroc and TLT-Turbo, etc. are well-known for the wonderful performance of their mine ventilation equipment and related services. At the same time, Asia-Pacific, occupied 30.89% Revenue market share in 2017, is remarkable in the global mine ventilation equipment industry because of the lowest cost of labor and raw material. The consumption of mine ventilation equipment is related to downstream industries and global economy. As there will always be some uncertain in the global economy in the

following years, the growth rate of mine ventilation equipment industry may not keep that fast. But it is surely forecasted that the market of mine ventilation equipment is still promising.
