Ball Bearings is a bearing consisting of a number of hard steel balls rolling between a metal sleeve fitted over the rotating shaft and an outer sleeve held in the bearing housing, so reducing friction between moving parts while providing support for the shaft. At present, in the foreign developed countries the miniature ball bearings industry on a higher level than other countries, the world's large enterprises are mainly concentrated in Japan. Meanwhile, foreign companies have variety products, strong R & D capability, the technical level is in a leading position. Although sales of miniature ball bearings brought a lot of opportunities, the study group recommends the new entrants just having money but without technical advantage and downstream support do not enter into the miniature ball bearings field.
