## Abstracts

The global Minimally Invasive Surgery Devices market was valued at 3270.56 Million USD in 2021 and will grow with a CAGR of 6.47% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Minimally invasive procedures (also known as minimally invasive surgeries) have been enabled by the advance of various medical technologies. Surgery by definition is invasive and many operations requiring incisions of some size are referred to as open surgery. The geographic segments included in this report are the North America, Europe, Asia-Pacific, and the Rest of the World (RoW). North America is further segmented into the U.S. and Canada. North America accounted for the largest share of this market in 2015, while Asia-Pacific is expected to grow at the highest rate. With rising geriatric population, presence of a large patient pool undergoing surgical treatments, growing awareness about modern surgical instruments and techniques, and implementation of various initiatives to reduce the rising healthcare expenditure in Asia-Pacific, the demand for minimally invasive surgical instruments in this region is expected to grow, which in turn will compel the key players to expand their geographical presence in this region.
