## Abstracts

The global Mixed Signal System-on-Chip (MxSoC) market was valued at 24720.45 Million USD in 2021 and will grow with a CAGR of 13.47% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Mixed Signal SoC (MxSoC, in short) is a relatively new category in SoC, which is designed for mixed signal (handling both analog and digital purposes). Smart sensor is one of the most exciting areas of Mixed Signal SoC design in today's market place. Many of these devices overlap areas already discussed. Mixed signal sensor SoCs are moving toward distributed intelligence in their sensor elements. This move is very prevalent in both the automotive and industrial automation market segments. These however, are examples where the deep sub-micron technologies often are not the best choice. For one thing the analog portion of the design tends to make up most of the die space and these markets demand mature, well-characterized processes. For this reason many of these devices fit quite well in 0.35 and 0.5 micron technologies.
