Modified Atmosphere Packaging is to use packaging materials with gas barrier properties to pack food. A certain proportion of mixed gas will be filled into the packaging according to the actual needs of customers, so as to prevent the quality decline of food in physical, chemical, biological and other aspects or slow down the speed of quality decline, so as to extend the shelf life of food and improve the value of food. The Asia-Pacific market is projected to grow at the highest CAGR, owing to the rapid growth in the modified atmosphere packaging market in this region.
