Modified silicone fluids are silicone fluids with additional functionality beyond the already fine properties of common dimethyl silicone fluid. This is achieved through the introduction of various organic groups. Depending on the organic group, silicone fluids can be given properties of water-solubility, compatibility or reactivity with various organic materials, paintability, and greater lubricity. Modified silicone fluids are silicone fluids with additional functionality beyond the already fine properties of common dimethyl silicone fluid. It can be divide into reactive silicone fluid and non-reactive silicone fluid according to types. Reactive silicone fluid is the main type and in 2016 it takes about 80% of global sale volume. And according to application, it can be used into coating, performance additive, construction and consumer care. Now performance additive is the main application, which owns 40.23% of all application.
