MCAA, also called chloroacetic acid, is a bi-functional molecule-structured acid. It is extensively used as a chemical intermediate for the production of numerous industrially and commercially important chemicals, including glycine, CMC, TGA, and cyanoacetic acid. It is also used in the production of betaine-type surfactants, synthetic caffeine, and vitamins, and the production of 2,4-D and methanoates for using in herbicides. MCAA is commercially produced through the chlorination of acetic acid during the production of acetic anhydride as a catalyst.
