Ceramics that provide properties such as fabrication and polycrystalline microstructure without reinforcement are called monolithic ceramics. Monolithic ceramics is one of the major types of products of advanced and technical ceramics. Based on the attributes mentioned above, monolithic ceramics are segmented into silicon nitride, zirconium oxide, zirconium carbide, aluminum nitride, silicon carbide, and aluminum oxide, and others. These ceramics are used to enhance lifespan and reliability of the material, and withstand high temperature. Based on product type, monolithic ceramics have been segmented into oxides and non-oxides. Monolithic ceramics are used in various applications due to their specific properties. These ceramics are generally employed in end-user industries such as electrical & electronics, automotive, aerospace, power generation, defense & military, medical, and transportation. Electrical & electronics is one of the major end-user industries of monolithic ceramics.
