The global Motherboard market was valued at 124.24 Million USD in 2021 and will grow with a CAGR of 1.46% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Motherboard (sometimes alternatively known as the mainboard, system board, baseboard, planar board or logic board, or colloquially, a mobo) is the main printed circuit board (PCB) found in general purpose microcomputers and other expandable systems. It holds and allows communication between many of the crucial electronic components of a system, such as the central processing unit (CPU) and memory, and provides connectors for other peripherals. Unlike a backplane, a motherboard usually contains significant sub-systems such as the central processor, the chipset's input/output and memory controllers, interface connectors, and other components integrated for general-purpose use. Asus was the global greatest manufacturer in the Motherboard industry, accounted for 13% revenue share in the global market, followed by Gigabyte Technology, Super Micro, Micro-Star International Co., Ltd, Advantech, Intel, Tyan (MiTAC), Kontron, Abaco, ASRock, Artesyn Embedded, Colorful Group, Curtiss Wright Controls, ADLINK, DFI, Maxsun, ONDA, Biostar. The top 5 companies had a combined revenue share of about 31% of the global total. China was the world's largest consumption and production area in 2018.
