A mountain bike is a bicycle designed for off-road cycling. Mountain bikes share similarities with other bicycles, but incorporate features designed to enhance durability and performance in rough terrain. These typically include a front or full suspension, large knobby tires, more durable wheels, more powerful brakes, straight handlebars, and lower gear ratios for climbing steep grades. Mountain bikes are typically ridden on mountain trails, single track, fire roads, and other unpaved surfaces. When riding mountain bike, it is necessary to have a good shoe to deliver power through the pedals. Some types of shoes are nylon-soled shoes, flat pedal shoe, clipless shoe. Choosing clipless spd-style shoes or flat-pedal, there are some important 'must-haves'. A decent amount of stiffness to make sure energy goes into the shoe and the trail is key. It is also important to look for heel and toe protection to defend your feet from rocks and crashes.
