The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

MRI Metal Detector refer to the Ferromagnetic Detection Systems for entry to MRI room. Audio and Visual alarm indication are integral with sensor array. Ferromagnetic objects taken through the MRI door into Zone 4 can lead to serious injury, time consuming delays, or costly damage to the valuable imaging system. When ferrous objects reach the MRI magnet's fringe field, they can be strongly attracted, at high speed, towards the magnet's core. This frightening and dangerous phenomenon is known as the projectile effect. There are currently three types of MRI Metal Detector in the market: Wall-mounted type, Mobile and Portable/Handheld types. Wall-mounted MRI Metal Detectors are the most favorite type using by hospitals and other healthcare centers. In the international market, the marketing channels characteristic differ from company to company. The giant companies are more likely to set their own big agents in some major countries and regions taking charge of regional business building their international market position. Companies in developing countries, in contrast, put more effort on direct selling business.
