### Abstracts

The global MRI System market was valued at 4568.47 Million USD in 2021 and will grow with a CAGR of 2.34% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

The major components of an MRI scanner are the main magnet, which polarizes the sample, the shim coils for correcting shifts in the homogeneity of the main magnetic field, the gradient system which is used to localize the MR signal and the RF system, which excites the sample and detects the resulting NMR signal. In 2017, the closed MRI systems segment accounted for the largest share of the MRI systems market. The large share of this segment can be attributed to the superconducting magnets used in these systems to obtain higher image quality and throughput.
