The global Multilayer Printed-wiring Board market was valued at 2255.74 Million USD in 2021 and will grow with a CAGR of 1.82% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact wwhich will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market verdors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Multilayer PCB is made up of three or more conductive layers(copper foil layer), these layers are pressed together and form multilayer PCB. Copper foil layer is bonded together by PP(prepreg), Multilayer PCB is one of the most complex types in printed circuit board.Most PCB manufacturers are finding the demand for multilayer boards increasing by leaps and bounds. This growing demand is fed by the need for smaller, lighter boards for use in electrical devices, military equipment, healthcare miniaturization, and an expanding market for smart devices incorporated in home automation systems. Smartphones and computers are perfect applications for multilayer PCBs with their need for compactness and light weight, yet sophisticated functionality. Within the PCB market, the communication industry is expected to remain the largest market. Continuous innovations in smartphones and increasing demand from emerging economies are expected to spur growth for this segment over the forecast period.
