Abstracts

The global Nanofiltration Membranes market was valued at 636.73 Million USD in 2021 and will grow with a CAGR of 3.2% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Nanofiltration is a membrane filtration-based method that uses nanometer sized through-pores that pass through the membrane. Nanofiltration membranes have pore sizes from 1-10 nanometers, smaller than that used in microfiltration and ultrafiltration, but just larger than that in reverse osmosis. Rise in demand for potable water & reduced freshwater sources and environmental restrictions on municipal & industrial wastewater discharges are primary factors that drive the nanofiltration membranes market.
