Abstracts

The global Nanoimprint Lithography System market was valued at 60.89 Million USD in 2021 and will grow with a CAGR of 9.93% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Nanoimprint lithography is based on surface structuring with a template consisting of topographic patterns. After imprinting, the patterns have to be transferred in order to obtain different functionalities. As lithography method, nanoimprint is fully compatible to the standard micro-fabrication techniques, including different transfer processes such as etching, lift-off, selective re-growth or diffusion. In most cases, a thin layer of resist is deposited on the substrate and then imprinted, resulting in a thickness contrast. This may need a further treatment by reactive ion etching (RIE) to remove the residual resist layer and to transfer the features into the used substrate material. Therefore, the process control of both imprinting and etching are important in order to obtain a suitable resist profile without any residual layer. For some particular applications, the resist layer can be replaced by functional materials or omitted for an imprint directly into the substrate. The world leading vendors in the market are Obducat which accounted the revenue market share of 35.56%, followed by EV Group and Canon. Globally, 145 units nanoimprint lithography system have been put into the market in the year 2017, while Europe attributes close to 59.31% of the world production, North America close to 28.97%, China 6.21%, and Japan 5.52%. Optical equipment accounts for 47.59% of all

nanoimprint lithography system consumption, compared to 40.69% for consumer electronics.
