## Abstracts

The global Nanoparticle Analysis market was valued at 252.42 Million USD in 2021 and will grow with a CAGR of 3.87% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Nanoparticle Analysis utilizes the properties of light scattering to detect the particle size distribution, zeta potential, molecular weight, etc. of samples, and can be used to analyze samples of nanoparticle, colloform, emulsion, submicron suspension, etc. The light scattered by the particles is captured using a CCD or EMCCD camera over multiple frames. Computer software is then used to track the motion of each particle from frame to frame. Nanoparticle Analysis is used widely in the chemistry, medicine, machinery, and materials science industry; it is mainly used in measuring of particle size, particle concentration, protein aggregation and Zeta potential. In 2014, the global production was about 3799 units.
