The global Natamycin market was valued at 163.84 Million USD in 2021 and will grow with a CAGR of 5.83% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Natamycin, also sold as Natacyn, is a type of white powder that fermented by the bacterium *Streptomyces natalensis*. Natamycin has an ability to inhibit fungal growth but cannot inhibit the growth of bacteria, it is often used in food industry like yogurt, cheese, raw ham, dry sausage as a natural preservative. Natamycin can also be used in medicine to treat diseases caused by fungi. Raw Materials are important component, occupying for the most proportion of cost. It's important and necessary to attach importance to raw materials sourcing. In general, the raw materials need to outsourcing, and the price, on-time rate and quality are very key indicators, to keep competitive market position, to maximize the profit. Actually, the price, on-time rate or quality, is just one of key factors to influence on the supply capacity and competitiveness. The lowest total production cost is the total index to maximize the profit. To a producer, can control the total production cost through worldwide procurement, localization procurement and concentrative purchase, more purchasing focuses on fewer suppliers to large-scale purchase, to large-scale and high efficiency. Now the logistics and information is well-developed, beneficial to worldwide procurement, localization procurement and concentrative purchase. In future, more manufacturers will attach importance to the raw

materials purchasing,
