## Abstracts

The global Natural Oil Polyol market was valued at 5444.41 Million USD in 2021 and will grow with a CAGR of 4.96% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Natural oil polyols, as the name suggests, are derived from a variety of natural oil sources and hold an impressive environment friendliness quotient owing to their non-polluting, bio-based raw materials. Key varieties of plant oils as well as animal oils used to manufacture polyols include soy oil, palm oil, castor oil, sunflower oil, canola oil, peanut oil, olive oil, mustard oil, lard, and tallow. However, the demand for plant oil polyols is presently much higher than that for animal oil polyols. Polyols find extensive usage as raw materials in the manufacture of polyurea and polyurethane, both important compounds with vast applications in industries such as construction, paints and coatings, furnishing, and automotive. While a significant share of the global polyol production still heavily involves petroleum and petroleum-derived feedstock, the rising demand for cleaner and environment friendly polyols is bringing about a dynamic shift in the scenario. Production of polyols from natural oils is increasingly gaining traction and the global natural oil polyol is swiftly becoming one of the key arms of the global polyol industry.
