The global Needle Roller Bearing market was valued at 3626.35 Million USD in 2021 and will grow with a CAGR of 3.04% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A needle roller bearing is a bearing that uses small cylindrical rollers. These rollers are used to reduce friction of a rotating surface. Compared to ball bearings, needle roller bearings have a large surface area that is in contact with the bearing raceway journals. The typical structure of a needle roller bearing comprises an inner race (or sometimes just a shaft), a needle cage which orients and contains the needle rollers, the needle rollers themselves, and an outer raceway. There are many different designs of needle roller bearing, including drawn cup, precision race, caged roller, and thrust roller. The major producers in this industry are Schaeffler, NSK and SKF, accounting for 16.60%, 12.27% and 10.98% of the market, respectively.
