Negative Pressure wound therapy (NPWT) is used to treat acute and chronic wounds. A vacuum source creates continuous or intermittent negative pressure inside the wound to remove fluid, exudates, and infectious materials to prepare the wound for healing and closure.¹ NPWT systems consist of a vacuum pump, drainage tubing, foam or gauze wound dressing, and an adhesive film dressing that covers and seals the wound. North America is the largest market of negative pressure wound therapy, both in production and consumption. In 2015, North America supplied more than 60% and consumed more than 50% of the global negative pressure wound therapy. Europe is the second largest market, following North America. Asia area is the emerging market with a higher growth rate. While the negative pressure wound therapy industry in Asia market is still underdevelopment with many hospitals and patients are still using common gauze to cure wound. In recent years, disposable negative pressure wound therapy is more and more popular. Among them, PICO single use product provided by Smith & Nephew is outstanding.
