Negative-Pressure Wound Therapy (NPWT) is a therapeutic technique (or) sealed wound-care system that involves usage of a vacuum dressing to promote healing of large chronic persistent wounds and acute complicated wounds. NPWT is also used for rapid healing of second- and third-degree burns. The system consists of an electronically controlled pump and a foam dressing that drains the wound. An adjustable negative pressure is applied via an airtight adhesive film that covers the wound. Single use disposable NPWT devices segment, followed by the portable NPWT devices segment, is expected to account for highest demand for NPWT devices over the forecast period.
