A centrifuge is a piece of equipment that puts an object in rotation around a fixed axis (spins it in a circle), applying a force perpendicular to the axis of spin (outward) that can be very strong. The centrifuge works using the sedimentation principle, where the centrifugal acceleration causes denser substances and particles to move outward in the radial direction. Europe is expected to be the most lucrative market in the global next generation centrifuge market, with an attractiveness index of 2.0 during the forecast period. The Europe next generation centrifuge market accounted for 30% value share in 2017. The North America regional market is projected to be the second lucrative market in the global next generation centrifuge market in terms of revenue in 2018, and the trend is projected to grow throughout the forecast period.
