Nitric acid is poisonous liquid that gives off choking red or yellow fumes in moist air. It is a strong oxidizing agent. It ionizes readily in solution, forming a good conductor of electricity. It is miscible with water in all proportions. Nitric acid is a clear to slightly yellow aqueous solution that has been treated to remove most free nitrogen oxides. This highly corrosive intermediate chemical is a strong mineral acid used in the production of nitrate based fertilizers, nylon precursors and other specialty chemicals. In this report we converting the different concentration of nitric acid into 100, namely in this report we counting the nitric acid(100%)`s capacity, production price and other items. Nitric acid is poisonous liquid that gives off choking red or yellow fumes in moist air. The main application of nitric acid is in the production of nitrogen fertilizers. Considerable quantities are also used in the chemical synthesis of intermediate products in the production of such things as dyes, drugs, and explosives. The global production of nitric acid reached 42085 K MT by the end of year 2016. In the world wide, the top five manufacturers of nitric acid are CF Industries Holdings, Yara, EuroChem, URALCHEM and Orica. The manufacturers of nitric acid are concentrated in America, Europe and China. Europe is the largest consumer in the world, which

occupied about 32.65% in 2016.
