The global Nitrocellulose market was valued at 751.67 Million USD in 2021 and will grow with a CAGR of 1.04% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography (North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Nitrocellulose is a highly flammable compound formed by nitrating cellulose through exposure to nitric acid or another powerful nitrating agent. When used as a propellant or low-order explosive, it was originally known as guncotton. If the cellulose is not fully nitrated then it has found uses as a plastic film and in inks and wood coatings. Today's industrial marketplace is increasingly competitive and requires the ability to reduce costs, raise production and increase accuracy for any business that is going to survive. For businesses that will truly thrive, the ability to lead development and get products to market faster is also critical.
