## Abstracts

The global Non-Contact Temperature market was valued at 1180.97 Million USD in 2021 and will grow with a CAGR of 13.58% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Non-Contact Temperature Sensors, whose the sensing element does not contact with the measured object, is also called as non-contact thermometers. This type of sensors is used to measure the temperature of moving objects, small objects or objects whose temperature change rapidly. And also be used for measurement of temperature distribution. Non-contact (infrared) temperature sensing reads temperature by intercepting a portion of the infrared energy emitted by an object or substance, and detecting its intensity. Non-contact is used to sense the temperature of solids and liquids, but cannot be used on gases due to their transparent nature. Fluke captured the top one revenue share spots in the Non-Contact Temperature Sensors market in 2015. Fluke dominated with 19.13 percent revenue share, followed by Accurate Sensors with 10.97 percent revenue share and OMRON with 8.49 percent revenue share.
