This report studies the Non-Contact Tonometers, Non-Contact Tonometer uses a small puff of air to measure an eye's pressure. Known as pneumotometry, the air puff flattens the patient's cornea in a non-invasive way, meaning eyes do not need to be numbed prior to the test. Tonometers is an instrument used for the determination of the intraocular pressure or the pressure of the fluid within the eye. Non-Contact Tonometers are Air Puff type tonometers which is the only type of tonometry that does not touch the surface of the eye. The patient sits facing the instrument, and a warm puff of air is directed at the eye.
