Abstracts

The global Non-Radioactive Nucleic Acid Labeling Product market was valued at 24.68 Million USD in 2021 and will grow with a CAGR of 7.42% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography (North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

In recent years, non-radioactive nucleic acid labeling and detection methodologies have become available in response to a desire by researchers and their institutions to move away from the use of radioisotopes. Advancements made in the areas of chemiluminescence and fluorescence have allowed for an easier transition. In non-radioactive assays, signal is generated through an enzymatic reaction with a chemiluminescent or chromogenic substrate; alternatively, detection can occur through the appropriate excitation and emission of a fluorophore-labeled probe. The classification of non-radioactive nucleic acid labeling product includes biotin, DIG system, fluorescent and others. The proportion of DIG system in 2017 is about 33%, and the proportion is in increasing trend from 2013 to 2017. Non-radioactive nucleic acid labeling product is widely used in DNA labeling, RNA labeling and oligonucleotide labeling. The most proportion of non-radioactive nucleic acid labeling product is used for DNA labeling, and the proportion in 2017 is about 56%. United States is the largest sales place, with a sales market share nearly 43.73% in 2017. Following United States, Europe is the second largest Sales place with the Sales market share of 26.79%.
