Nonwoven materials are the fabrics made of parallel laid, cross laid or randomly laid webs bonded with application of adhesives or thermoplastics fibers under the application of pressure and heat. Nonwoven materials exhibit properties such as liquid repellence, absorbency, resilience, softness, stretch, strength, flame retardancy, thermal insulation, cushioning, filtration and acoustic insulation. Due to all these properties, nonwoven materials and products are widely used in various industries in Asia Pacific and the Middle East region. The major product segments of nonwoven materials and products include polypropylene, polyester and nylon. Disposable applications include adult incontinence products, baby diapers, disposable wipes, feminine hygiene products, medical/surgical products, disposable garments, linens, fabric softener substrates and filters, whereas durable applications comprise home furnishings, wall coverings, roofing products, geo-textiles, coating substrates and apparel interlinings. Additionally, the market is segmented on the basis of regions such as Asia Pacific and the Middle East and sub-segmented on the basis of major countries in these regions.
