Abstracts

The global Nuclear Magnetic Resonance Spectrometer (NMR) (NMR Spectrometer) market was valued at 8.04 Million USD in 2021 and will grow with a CAGR of 3.56% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography (North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

This report studies the NMR Spectrometer market. Nuclear Magnetic Resonance spectroscopy is a powerful and theoretically complex analytical tool. Nuclear Magnetic Resonance (NMR) spectroscopy is an analytical chemistry technique used in quality control and research for determining the content and purity of a sample as well as its molecular structure. For example, NMR can quantitatively analyze mixtures containing known compounds. For unknown compounds, NMR can either be used to match against spectral libraries or to infer the basic structure directly. Once the basic structure is known, NMR can be used to determine molecular conformation in solution as well as studying physical properties at the molecular level such as conformational exchange, phase changes, solubility, and diffusion. In order to achieve the desired results, a variety of NMR techniques are available. Nuclear magnetic resonance spectroscopy is also used to study the interaction of various molecules, the kinetics or dynamics of molecules and the composition of mixtures of biological or synthetic solutions or composites. The size of the molecules analyzed can range from a small organic molecule or metabolite, to a mid-sized peptide or a natural product, all the way up to

proteins of several tens of kDa in molecular weight. In the past few years, as the main raw material price was relatively stable, with the addition of a sharp increase in production capacity, expected that the NMR Spectrometer raw material price will be stable in the short term. However, the improvement of energy, transportation costs, and employee wages, will play a significant role in promoting the cost of NMR Spectrometer. There are companies adding new capacities and aims at the cost and quality leadership which shall improve profitability. As the same time, companies are focusing on technological innovation, equipment upgrades, and process improvements, to reduce costs and improve quality. The oversupply of NMR Spectrometer in the market has had a negative impact but has been countered by the magnitude of the increase in demand, resulting in uncertainty in the NMR Spectrometer market. In China, NMR Spectrometer manufactures only have Shanghai Huantong. As the same time, in Chinese market, some common foreign brands occupy relative large market share, such as Bruker and JEOL.
