The global Nuclear Medicine/Radiopharmaceuticals market was valued at 5305.79 Million USD in 2021 and will grow with a CAGR of 8.16% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Radiopharmaceuticals (also known as radioactive drugs) are drugs that contain radionuclides that emit radiation. The distribution of the radiopharmaceutical within the body is determined by the physiochemical properties of the drug, the stability of the radiolabel, the purity of the radiopharmaceutical preparation, the pathophysiologic state of the patient, and the presence or absence of interfering drugs. Dynamic and static images of the distribution of the radiopharmaceutical within the body can be obtained using a g-camera or another suitable instrument appropriate for the radiopharmaceutical being imaged?for example, positronemitting radiopharmaceuticals.Nuclear medicine is a medical specialty that allows modern diagnostics and treatments using radiopharmaceuticals original radiotracers. Radiopharmaceuticals are considered a special group of drugs and thus their preparation and use are regulated by a set of policies that have been adopted by individual member countries. In China, radioactive drug approval process is cumbersome, drug research and development cycle is too long and the high-end equipment of China mainly relies on imports, which restrict the development of nuclear medicine.
