The global Nuclear Moisture Separator Reheaters market was valued at 55.99 Million USD in 2021 and will grow with a CAGR of 5.27% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Moisture separator reheaters (MSR) are used between the high pressure turbine outlet and the inlet of low pressure turbine at a nuclear power plant. These devices are utilized to remove moisture from the steam and reheat it before it enters the low pressure turbines. Moisture Separator Reheaters play a significant role in increasing the thermodynamic efficiency of nuclear power facilities and also protect the low pressure turbine blades from corrosion. Horizontal MSR accounts for more than 75% of the market, and the market share has not changed a lot. Vertical MSR is much fewer than horizontal MSR. They are used in nuclear companies and more than 80% of the reactors are PWR. According to our research, Alstom Power and GE Energy are the largest producers in the world Since GE acquired energy business of Alstom in 2015, GE has become the top one manufacturer which occupied about one third of the market share in 2015. Other companies have much smaller market than GE with no more than 10% of the market.
