Nylon Filter is kind of filter which is mainly made by nylon. It can be classified for nylon membranes, capsule filters, syringe filters, bag filters by different appearance. Nylon membranes filters are usually used for general filtration, medical assays, HPLC sample preparation, sterilize and clarify aqueous and organic solvent solutions and other fields. Syringe filters are provide fast and efficient filtration of aqueous and organic solutions for use with pharmaceutical, environmental, biotechnology, food/beverage, and agricultural testing applications. First, nylon filter is a kind of filter products, which is mainly used for general filtration, medical assays, HPLC sample preparation, sterilize and clarify aqueous and organic solvent solutions and other fields. With the widely application of the nylon filter, so nylon filter is a kind of huge market potential product. Second, nylon and PP or other plastic materials as the main raw materials for the produce of nylon filter. With the development of the downstream industries, nylon filter production keeps increase recent years, some nylon and PP manufacturers entered the nylon filter industry Third, all manufactures in the world are committed to the improvement of product. These two years, some Chinese manufactures can almost catch up with the world's leading technology too. Fourth, the import and export percent

of this industry is not high. Because many international manufactures expand their business through building factories or investments. Fifth, this industry is affected by the economy and policy, so it's important to put an eye to economic indexes and leaders' prefer. With the global economic recovery, more and more people pay attention to rising environment standards, especially in underdevelopment regions that have a large population and fast economic growth, the need of nylon filter will increase. Sixth, we tend to believe this industry now is close to mature, and the consumption increasing degree will show a smooth curve. On product prices, the slow downward trend in recent years will maintain in the future, as competition intensifies, prices gap between different brands will go narrowing. Similarly, there will be fluctuation in gross margin. Seventh, the global nylon filter production will increase to 313 million unit in 2015, from 260 million unit in 2010, it is estimated that the global nylon filter demand will develop with an average growth rate of 4.3% in the coming five years.
