Abstracts

The global Oak Wine Barrel market was valued at 820.87 Million USD in 2021 and will grow with a CAGR of 5.46% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

This report studies the Wine Barrels market. Some wines are fermented 'on barrel', as opposed to in a neutral container like steel or wine-grade HDPE (high-density polyethylene) tanks. Wine can also be fermented in large wooden tanks, which when open to the atmosphere are called 'open-tops'. Other wooden cooperage for storing wine or spirits range from smaller barriques to huge casks, with either elliptical or round heads. The tastes yielded by French and American species of oak are slightly different, with French oak being subtler, while American oak gives stronger aromas. To retain the desired measure of oak influence, a winery will replace a certain percentage of its barrels every year, although this can vary from 5 to 100%. Some winemakers use '200% new oak', where the wine is put into new oak barrels twice during the aging process. Bulk wines are sometimes more cheaply flavored by soaking in oak chips or added commercial oak flavoring instead of being aged in a barrel because of the much lower cost. Europe accounted for the largest market share of wine barrel market and is expected to remain dominant over the forecast period. This is due to the rapidly growing parent market of wine in the Europe. North America is the second largest region to account for maximum market share of the overall wine barrel market and has also

registered a significant growth rate in terms revenue due to increasing demand of wine.
