Energy storage is the capture of energy produced at one time for use at a later time. A device that stores energy is generally called an accumulator or battery. Energy storage involves converting energy from forms that are difficult to store to more conveniently or economically storable forms. The manufacturers range from large multinational corporations to small privately owned companies compete in this industry. The top five producers account for more than 70% of the revenue market. Regionally, Europe is the biggest revenue area, also the leader in the whole offshore energy storage energy storage industry. Europe occupied 90% of the sales market in 2019. Norway is the largest consumption country in the world because of the related regulations and policy. It is followed by North America, which accounted for around 8% of the global total industry. Other countries did not have obvious sales in 2019.
