Offshore Wind Power is the generation of electricity from wind by constructing wind farms in water bodies. It is estimated to be one of the cheapest and cleanest forms of electricity generation. Offshore wind turbines are larger in size and have greater wind speed compared with onshore wind turbines. Offshore wind power offers various advantages compared with onshore wind power. With regards to the world economy of 2015, recovery of China and other developing countries economy is expected to be more powerful, the European economy will continue to be stuck in slump, and growth of the Japanese economy and other emerging economies will be decelerated. Thus the world economy as a whole will show mild growth in 2015. Overall, the global economy is stable. For the environment protection intension, wind energy, especially the Offshore Wind Power had attracted more attention in the past years. Therefore, the demand of Offshore Wind Power is strong, which has good development prospect.
