Oil Tempered Spring Steel Wire is a cold drawn, heat treated wire. The process of tempering increases the strength and hardness of the wire without making the wire more brittle. Tempering makes oil tempered wire perfect for springs and wire forms. This oil tempered wire have excellent properties as spring material, and is used as various springs for the automobile such as the valve springs of the engine, the clutch springs, the transmission springs, and the suspension springs. Oil tempered spring steel wire was originally developed in Sweden, and then Japan became the major country in producing it. For now, Japan and some Europe countries are still the leader of the industry.
