Olefin derivatives are chemicals that are produced by further processing basic olefins. The olefins derivatives market does not include poly-olefins. Olefin derivatives are manufactured by employing various Industry chemical processing methods such as chlorination, oxidation, and ammoxidation of olefins. Olefin derivatives are some key Industry chemicals and also act as raw materials for producing other chemical products. Olefin derivatives market includes acrylonitrile, ethylene oxide, propylene glycol, butanol, etc. The use of acetonitrile in pharmaceutical products is increasing rapidly. This is primarily driven by the introduction of advanced pharmaceutical products and improved standards of living in industrialized countries. Acetonitrile is used as a basic raw material for synthesizing vitamins A and B1, sulfa pyrimidine, cortisone, carbonate drugs, and some amino acids. Additionally, it is also used as an important solvent in the pharmaceutical industry, with applications as a reagent, reaction solvent and extraction solvent. For instance, acetonitrile is used as an extraction solvent in the production of insulin and antibiotics (third-generation cephalosporins).
