Oligonucleotides are short nucleic acid polymers used in research, genetic testing and forensics. Oligonucleotides are usually made up of 13 to 25 nucleotides and are designed to hybridize specifically to DNA or RNA sequences. Solid-phase clinical synthesis is used to manufacture these small bits of nucleic acid for use in polymerase chain reaction (PCR), DNA sequencing, library construction and artificial gene synthesis. Oligonucleotide is widely used in Research, Pharmaceutical and Diagnostic. The most proportion of Oligonucleotide used in Research, and the revenue in 2018 is 409.97 M USD. Moreover, increase in focus on targeted gene therapies has revolutionized treatment of incurable conditions caused by genetic mutations. Increase in demand for sequencing applications by clinical, diagnostic, academic, and drug development is witnessed by manufactures.
