Abstracts

The global Open MRI Systems market was valued at 749.34 Million USD in 2021 and will grow with a CAGR of 3.67% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Open MRI systems were designed specifically to help address the comfort of patients. Instead of a cylindrically shaped system that encloses the patient`s entire body, an open MRI system is designed in a way that looks like a donut hovering above the patient, with the sides of the system open. The magnets are positioned above the patient and below the patient instead of all around them like in a closed MRI system.
