The global Optical Emission Spectroscopy market was valued at 468.6 Million USD in 2021 and will grow with a CAGR of 4.94% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Optical Emission Spectroscopy, or OES, is a reliable and extensively used analytical technique used to establish the elemental composition of a wide range of metals. The elements and concentrations that can be determined by OES analyzers depend on the material being tested and the type of analyzer used. APAC is expected to hold the largest share of the global optical emission spectroscopy (OES) market in 2018. Continuous advancements in APAC, in terms of economic growth, infrastructural developments, and the automotive industry, are likely to boost the requirement of OES equipment in this region.
