The global Optical Encoder Ics market was valued at 20.88 Million USD in 2021 and will grow with a CAGR of 6.68% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Optical encoders have been the popular choice in the motion control market for many years. They are comprised of an LED light source (typically infrared) and photodetectors placed on opposite sides of an encoder disk. This disk is constructed of plastic or glass and contains a series of alternating transparent and opaque lines or slots. During the rotation of the disk, the LED light path is interrupted by the alternating lines or slots on the disk, which in turn produces the typical square wave A & B quadrature pulses used to determine shaft rotation and speed. Global major companies profiled in the Optical Encoder Ics market include Broadcom, New Japan Radio, etc. Global top two companies account for nearly 50% of the market share. In terms of consumption region, the market for Optical Encoder ICs divided into five geographic regions: In Europe, total Encoder IC accounted for about 25%. In North America, total Encoder IC accounted for over 30%. The Encoder IC market in Asia-Pacific accounted for over 30%.
