The global Optical Transceiver market was valued at 8350.65 Million USD in 2021 and will grow with a CAGR of 21.7% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

An optical transceiver is a device that uses fiber optical technology to send and receive data. The transceiver has electronic components to condition and encode/decode data into light pulses and then send them to the other end as electrical signals. To send data as light, it makes use of a light source, which is controlled by the electronic parts, and to receive light pulses, it makes use of a photodiode semiconductor. Optical transceivers are a preferred choice because they offer higher bandwidth over long distance. Along with this, it also provides data security. Optical transceivers are easier to install and eliminate the risk of electric sparks.
