The global Organic Peroxide market was valued at 270.97 Million USD in 2021 and will grow with a CAGR of .87% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography (North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Organic peroxides are organic compounds containing the peroxide functional group (ROOR'). If the R' is hydrogen, the compounds are called organic hydroperoxides. Peresters have general structure RC(O)OOR. The O-O bond easily breaks, producing free radicals of the form RO'. Thus, organic peroxides are useful as initiators for some types of polymerisation, such as the epoxy resins used in glass-reinforced plastics. It is mainly used as polymerization initiator or crosslinking agents in the chemical and plastics industry. Degrading agent is another important application of organic peroxide. In 2016, initiator took 76.68% of total consumption share. Crosslinking agent and degrading agent each took 11.72% and 6.37% consumption. Other applications totally took 5.23% consumption share.
