Ortho Cresol is an organic compound with the formula $\text{CH}_3\text{C}_6\text{H}_4(\text{OH})$. It is widely used intermediate in the production of other chemicals. It is a derivative of phenol and is an isomer of p-cresol and m-cresol. Ortho Cresol is an important chemical intermediate, there are two main methods to produce o-cresol including extraction process (coal tar as material) and synthesis process (phenol and methanol as materials). In order to decrease the cost and increase the profit, the extraction process now is mainly adopted to produce o-cresol. In 2017, about 60.86% of the global production was produced by extraction process. O-Cresol can be applied into many fields such as resin, herbicides, disinfectant and others, the resin is the main applied field in the world. In 2017, 26138 MT was used to synthesize resin, taking 46.01% of the global production.
