Overactive bladder is a medical syndrome, defined by urinary incontinence usually characterized by high urine frequency or nocturia. The common symptoms of OAB includes urgency, high urinary frequency and urge incontinence. Anticholinergic agents are considered as the first line treatment for overactive bladder disorders. Flavoxate, oxybutynin, tolterodine are some of the generic drugs used for the treatment of overactive bladder. These drugs acts by antagonizing cholinergic receptors that provides the relief from the frequent urination. Increasing population diagnosed with overactive bladder disorder coupled with aging population will drive the growth of this market. Furthermore, manufacturers are continuously increasing their research and development expenditure to develop novel drugs such as neuromuscular blocking agents with innovative mechanism of actions. This factor will provide healthy platform to develop this market and hence drives the market growth.
