The global Overall Turbochargers market was valued at 1645.3 Million USD in 2021 and will grow with a CAGR of 10.96% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Turbocharger is a type of forced induction system. Turbocharger uses the exhaust flow from the engine to spin a turbine, which in turn spins an air pump, compressing the air flowing into the engine. Turbocharger lets the engine squeeze more air into a cylinder and more air means more fuel can be added. So the engine can produce more power without increasing the engine emissions. The turbocharger has four main components, the turbine, the compressor, the control system and the bearing system. Turbochargers are useful in helping the automotive industry to meet the norms and standards regarding the emission of exhaust gasses such as CO₂, nitrous oxide, and particulate materials from the automobile. Augmentation of the engine with a turbocharger helps in addressing the increasing demand for fuel-efficient vehicles from consumers.
